

ABSTRACTMOBILE DEVICE FOR POWERING, RECHARGING AND/OR CONTROLLING A  
HEIGHT-FIXED ELECTRIC APPLIANCE.

The invention relates to a mobile device for powering, recharging and/or controlling a height-fixed electric appliance. The inventive device comprises first connection means (3) which can co-operate with second connection means (50) belonging to the electrically-operating appliance (5), said first connection means (3) being disposed at the end of a stick (2) or similar element housing linking means which connect the first connection means (3) to control means which are disposed at the other end of the stick or similar element (2).
